

FACT SHEET

SOLAR HOT WATER SYSTEMS

What brands do we retail?

EDSON SOLAR – Evacuated Tube Collectors with stainless steel or vitreous enamel storage tanks.

Does the tank go on the roof?

No. Both systems are a recirculation or thermo-siphon system with the booster or storage tank located either on ground level or in a ceiling cavity.

What configuration options are there?

All systems come in kit form as either an electric or gas boosted recirculation system. Evacuated tube can also be installed as a thermosiphon option in low pressure gravity systems using hot water from a slow combustion stove as the booster.

Why choose evacuated tube technology?

Evacuated tube technology is generally accepted to be in the order of 40% more efficient than traditional flat plate collectors during the colder months of the year however during the warmer months, both systems will produce more hot water than you will normally require.

What warranties apply to evacuated tube systems?

- | | |
|------------------------|---------------|
| • Stainless Steel Tank | 15 – 20 Years |
| • Glass Lined Tank | 5-7 Years |
| • Manifold | 15 Years |
| • Evacuated Tubes | 15 Years |
| • Pump | 2 Years |
| • Valves | 1 Year |

What rebates might I be eligible for?

All systems are eligible for STC'S rebates. Excepting retrofit, mobile and Thermo-siphon options.

What are the criteria for rebate eligibility?

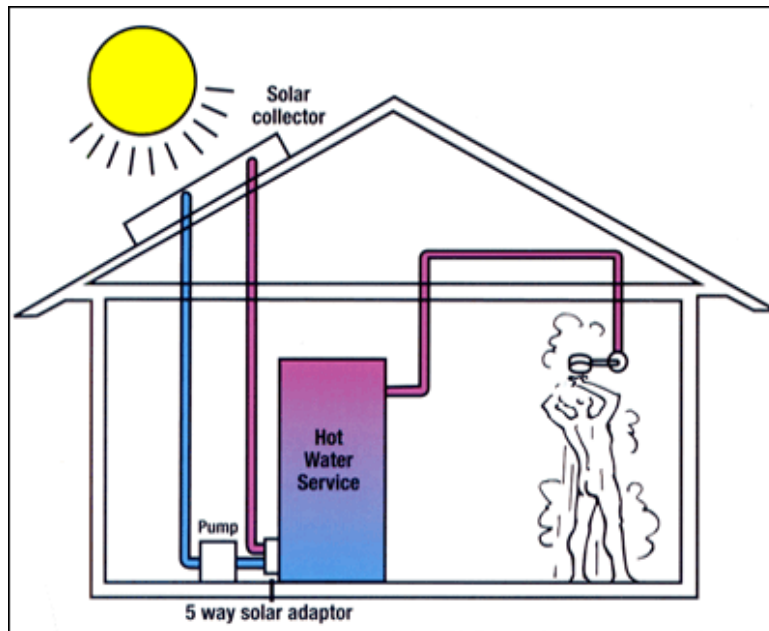

Office of the Renewable Energy Regulator (STCs) Criteria

- Must be a complete model listed in the register of Solar Water Heaters
- Must have been installed in the last 12 months.
